**P**ERHAPS NEXT MONTH, THOSE 34,000-PLUS individuals wrongfully accused of unemployment fraud in Michigan from October 2013 to September 2015 will finally hear that they will receive some well-deserved remuneration for the harsh treatment meted out by Michigan Integrated Data Automated System (MiDAS). Michigan legislators have promised to seek at least US \$30 million in compensation for those falsely accused.

This is miserly, given how many people experienced punishing personal trauma, hired lawyers to defend themselves, saw their credit and reputations ruined, filed for bankruptcy, had their houses foreclosed, or were made

This time, it was the Michigan Unemployment Insurance Agency (UIA) which wanted to replace a 30-year-old mainframe system running COBOL. The objectives of the new system were threefold and reasonable. First, ensure that unemployment checks were going only to people who deserved them. Second, increase UIA's efficiency and responsiveness to unemployment claims. And third, through those efficiency gains, reduce UIA's operational costs by eliminating more than 400 workers, or about one-third of the agency's staff. After spending \$44,400,558 and 26 months on the effort, the UIA launched MiDAS, and soon proclaimed it a huge success [PDF], coming in under budget and on time, and discovering previously missed fraudulent unemployment filings.

## Finding Fake Fraud

Soon after MiDAS was put into operation, the number of

>>

## A review found that MiDAS adjudicated—by algorithm alone—40,195 cases of fraud, with 85 percent resulting in incorrect fraud determinations

The cash windfall was due in part to the harsh penalties imposed on those accused, such as the levy of a 400 percent penalty on the claimed amount of fraud [PDF], the highest in the nation.

Further, once a claim was substantiated, the state could immediately go after a person's wages and federal and state income tax refunds, and make a criminal referral if payments weren't forthcoming.

While the UIA was patting itself on the back for a job well

required with the legacy system.

In addition, the MiDAS-generated notices of fraud that claimants had to respond to were designed in such a way as to almost ensure someone inadvertently would admit to fraud. MiDAS also accused some people of fraud even though they had never received any unemployment. Furthermore, MiDAS was apparently basing some of its findings on missing or corrupt data. In effect, MiDAS was built upon the assumption that anyone claiming unemployment insurance was trying to defraud the UIA, and it was up to claimants to prove otherwise.

All the failings of MiDAS are too numerous to repeat here; I suggest you read the many excellent published stories such as these ([here](#) and [here](#)) from the *Detroit Metro Times* and [here](#) from the Center of Michigan for more details and links to other articles which will leave you shaking your head in

sometning was wrong witrn now MiDAS was determining fraud. However, the public and political outcry finally forced the UIA to admit that perhaps there was indeed a significant problem with MiDAS, especially its “robo-adjudication” process and the lack of human review. The UIA decided to cease using MiDAS for purely automated fraud assessment in September 2015, after pressure from the federal government and the filing of a federal lawsuit against the agency that same month.

The federal lawsuit against the state concluded in January 2017 with the UIA finally apologizing for the false claims of unemployment fraud. A thorough review found that from October 2013 to September 2015, MiDAS adjudicated—by algorithm alone—40,195 cases of fraud, with 85 percent of those resulting in incorrect fraud determinations. Another 22,589 cases that had some level of human interaction involved in a fraud determination found a 44 percent false

accused of fraud, and has supposedly returned all the fines it had collected, the UIA has also strenuously fought against the class-action lawsuit [PDF] brought against it for the personal and financial damages those phony accusations created. The UIA strongly lauded a state appellate court ruling in July 2017 dismissing the lawsuit because those wrongly accused missed the deadline for making their compensation claims.

Given that the UIA stonewalled all attempts to discover the depth, breadth, and reasons behind the fraudulent fraud accusations, the ruling may be legally correct, but it is morally ludicrous. The ruling, which is being appealed to Michigan's Supreme Court, so shamed the state's legislators and governor that they agreed to changes to the state's unemployment law and, at least, in principle, to the creation of a MiDAS victim compensation fund. We'll see next month whether one actually is created.

received letters from Centrelink stating that they have to prove that they haven't applied for benefits they didn't deserve, with more than 20 percent receiving the notices in error or with debt amounts significantly in excess of what they actually owed. The Australian government has insisted from the start that the automated system Centrelink is working as intended, which according to at least one report, works poorly by design as a way to cut operational costs, if not generate money it isn't legally owed. When a parliamentary group recommended that the robo-adjudication process be halted, the government refused to hear of it.

the U.S. Veteran's Administration's implementation of an automated disability rating system to reduce paperwork and personnel costs and increase productivity that significantly overestimated the disability benefits veterans should have received in comparison to what a human rater would have approved. In fact, in 1.4 million algorithmically made rating assessments, only 2 percent were later overridden. The same hesitancy to see anything wrong with automated decisions occurred with both MiDAS and Centrelink.

As algorithms take on even more decisions [PDF] in the criminal justice system, in corporate and government hiring, in approving credit and the like, it is imperative that those affected can understand and challenge how these decisions are being made. Hopefully, the IEEE Global Initiative on Ethics of Autonomous and Intelligent Systems will help ensure that the risks of automated decision-making systems ~~are not placed upon in the name for their benefits which~~
